

What is a Physician Enablement Platform?

Owning and operating a physician practice has never been the easiest business to be in. Over the past few years, it's become even more difficult - especially for independent physicians who want to maintain their autonomy and build a thriving, sustainable practice.

That's where Alo comes in. Alo is a physician enablement platform that provides the tools for independent clinicians to shape health care for the better - for patients, communities and themselves. Founded by a team of industry veterans that understand how to change the playing field for independent practices, Alo helps physicians focus on making sustainable improvements in care.

Alo gives North Carolina physicians a solution built in North Carolina, where healthcare consolidation has been on the rise. For example, the number of independent primary care doctors dropped 22% between 2010 and 2018, according to a 2019 NCMS report.

Alo provides strategic services and solutions to help independent practices and clinicians manage the business of medicine. These include: the Alo Clinically Integrated Network (CIN), enabling like-minded providers to collaborate in delivering high-quality, coordinated care; Avance Care, Alo's comprehensive solution for independent practice owners who want administrative, operational and marketing support without giving up control of patient care and practice management; and capital investment options tailored to meet physicians' practice and individual needs.

The company is headquartered in Durham and supports more than 30 independent practice and provider groups delivering high-quality care to more than 100,000 covered patients. Learn more at www.alosolutions.com.
